

# Automate claims processing with AnyDoc

Dramatically lower costs and increase productivity

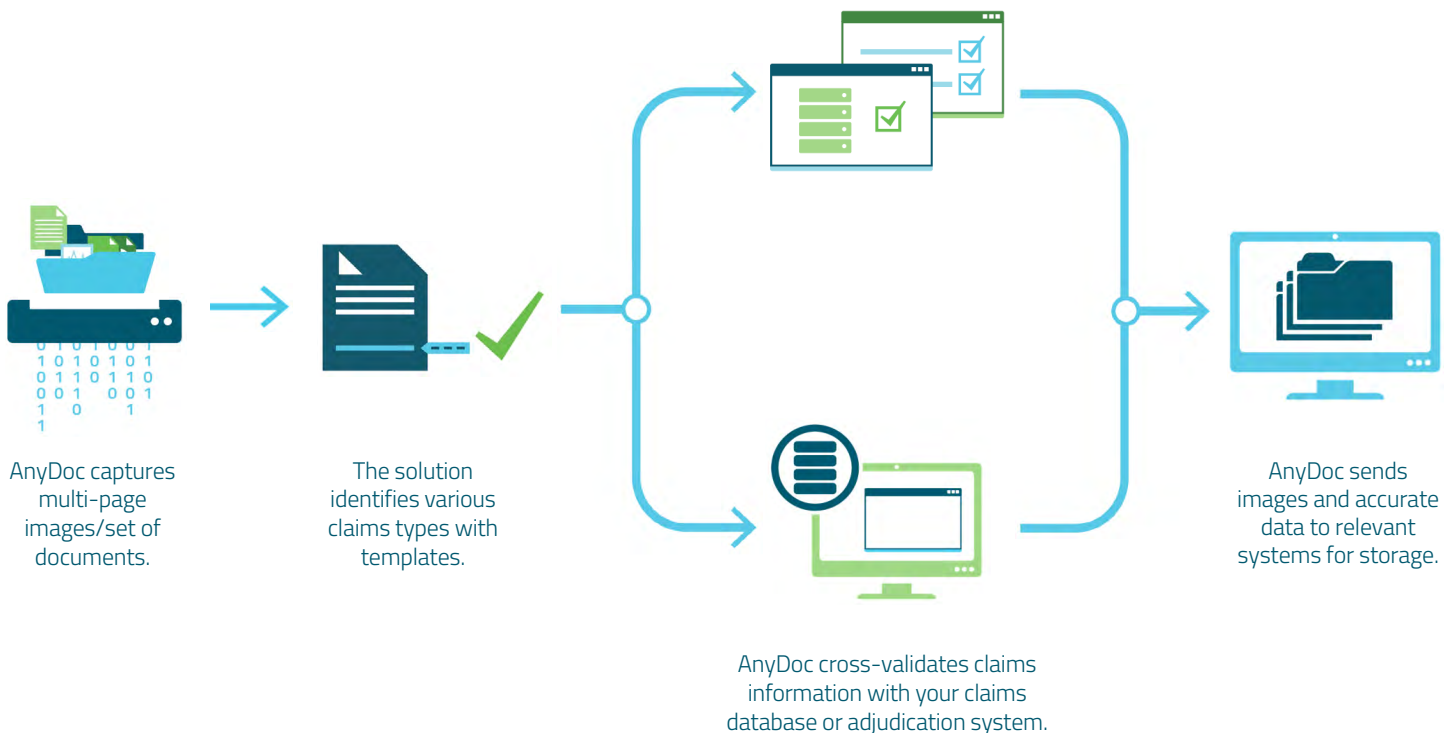

**Accelerates healthcare claims processing**

**Improves accuracy**

**Minimizes operational costs**

Healthcare payers of any size all have the same problem. Claims forms arrive by mail, fax, electronic data importing (EDI), etc., and there's continuous pressure to get accurate data off of those forms and into a claims adjudication system. Manual processing doesn't provide the speed, nor the accuracy to cost-effectively sustain a growing operation.

By leveraging AnyDoc capture and automation your staff turn claims around within hours, not days.

## AnyDoc automates EDI processing and eliminates the need to manually review every claim.

### Accelerates healthcare claims processing

The time and effort spent on manual data entry and verifying critical information slows processing tasks - inflating labor costs and ultimately negatively impacting revenue.

AnyDoc meets the unique and complex requirements of specialized healthcare claims forms, transforming stacks of paper into useable digital records in a fraction of the time of manual processing, while using fewer resources. The solution automatically identifies each claim, as well as any related attachments. AnyDoc then associates those attachments with the correct claims form.

On average, using the healthcare claims solution allows organizations to take incoming claims from the mailroom through automatic processing and into electronic storage in less than eight hours. With just a few keystrokes, authorized users may immediately access images of scanned documents from your chosen content repository.

### Ensures accurate data enters your claims database or adjudication system

By using customizable business rules to automate validation, AnyDoc significantly reduces, and may even eliminate, human error. The easy-to-use capture template creator allows staff to apply your organization's specific business rules to support current and future claims processing needs. It also identifies document layouts for each type of claim.

The solution automatically verifies data, including diagnostic, NPI, HCPS and CPT codes against your database table to prevent errors from occurring downstream. An additional feature, check-digit verification, ensures NPI numbers are properly identified.

### Reduces costs and delays

AnyDoc immediately reduces the costs and delays of manually processing CMS-1500, UB04 and J400 claims forms. By decreasing the time it takes to process and verify incoming data, your staff have more time to spend on value-added tasks, like researching claims. Teams accomplish more work with fewer resources, eliminating both processing bottlenecks and the need for overtime.

AnyDoc automates paper claims, but the same investment also expands to accommodate EDI claims. Your organization can add more repricing partners, more providers, more claims volume and more business rules at any time. As your business grows, AnyDoc grows with you.
